Presents

# HOT COMPOSTING

A PRESENTATION BY  
ELISE PICKETT

Hot composting is a wonderful way to quickly generate valuable nutrient rich soil for your garden. And it can be done in as little as 3 square feet. Learn the benefits of hot compost over cold composting, how to make it work at small and large scale, as well as sourcing materials for free. We will cover the entire process so that you can confidently start your own hot compost pile at home right away!

Sat. June 17 | 2 PM  
Community Meeting Room
